

## Task Details

- Build a video app similar to YouTube (refer to the wireframe below)
- Store 10 videos in a PostgreSQL database
  - Ideally, use [Supabase PostgreSQL database](#)
  - Store video data like channel name, title, description, likes, etc.
- Build a simple UI to display videos (along with video details) on a scrollable screen
- Add a search bar and implement search functionality

## Deliverables

- GitHub repository URL (with APK)
- Demo video explaining your approach
